

PROJECT IMPLEMENTATION PLAN

Reference No.: 69

Date of Issue	16 March 2023
Project Code	22-SN-04-GE-DMP-C-MN01
Title	Productivity Improvement in Energy and Mining Sectors through Knowledge Management
Timing	1 April 2023–30 September 2023
Hosting Country(ies)	Mongolia
Venue City(ies)	Ulaanbaatar and Elsewhere
Modality	Hybrid In-country
Implementing Organization(s)	Mongolian Productivity Organization
Participating Country(ies)	Mongolia
Overseas Participants	Not applicable
Local Participants	Not applicable
Closing Date	Not Applicable
Remarks	Not applicable

Objectives	Establish demonstration companies in the energy and mining sectors on applications of knowledge management (KM); showcase the processes and tangible results of productivity improvement and innovation with the use of KM tools; and use them as reference benchmarks for productivity improvement through KM in other member countries.
Rationale	In 2019, Mongolia's mining sector accounted for approximately 22% of GDP and 70% of exports. However, challenges such as a lack of proper infrastructure and environmental issues have impacted the productivity growth of the sector. This demonstration company project will introduce KM best practices to enable mining enterprises to make better decisions and deliver more productive results.
Background	<p>An effective KM system can streamline companies' knowledge while making it accessible to every employee. KM applications can assist in decision-making in today's complex, uncertain, and volatile environment.</p> <p>The selected demonstration companies in this project have been implementing basic and some advanced KM tools. However, they need to manage larger amounts of data and information accumulated over the years in making business decisions and functioning more efficiently.</p> <p>As knowledge has become the most strategic of corporate assets and determines business success, it is vital for companies to identify and measure knowledge assets including establishing processes and encouraging behavioral changes supporting the management of knowledge and information. It is also crucial to train employees in knowledge asset identification and measurement through the provision of consultancy and training.</p>
Topics	Analysis of current challenges and opportunities related to KM; workshops and training on the KM framework; and consultancy related to KM and KM roadmap development.
Outcome	Demonstration companies that improve productivity through KM will be established; the processes and results of productivity and innovation improvement using KM tools will be disseminated; and reference benchmarks for productivity improvement through KM will be established.
Qualifications	<p>This project will be implemented in the following demonstration companies:</p> <ul style="list-style-type: none"> - Erdenet Mining Corporation State-owned Enterprise - Thermal Power Plant No. 3 Joint Stock Company - Cable Utilization and Maintenance Center, Ulaanbaatar Electricity Distribution Network Joint Stock Company

Please refer to the implementation procedures circulated with this document for further details.
